1. Executive summary

Michaelhouse School Management System (MSMS), as we're developing it, is a centralized system designed and suited for a private boarding school, with the aim of managing its operations and commercial activities. We all know the Michaelhouse school as one of a few in South Africa that can be classified as an actual business. This system integrates various business subsystems, which include student admissions, tuition, boarding house, transport, sports, cafeteria, academic, maintenance, and events, among others. It provides a framework for different stakeholders, such as administrators, staff, parents, and students, to access their respective functions efficiently, thus enhancing its efficiency, communication, financial management, and decision-making, among other benefits, by providing a unified web-based system and mobile platform for its operations.

2. Business processes (List all Business processes for the project)

No	Business process	Sem / Inc	Brief description
1.	<i>Student Admission Management</i>	<i>1/1</i>	<i>Parents submit the application and the admin will review and send the feedback back to the parent</i>
2.	<i>Tuition and fee billing</i>	<i>1/1</i>	<i>Parents, guardians, students, or alumni use the system to make payments for tuition, fees, and other school-related services (such as boarding, cafeteria, transport, or events).</i>
3.	<i>Academic Management</i>	<i>1/1</i>	<i>Manage all teaching and learning processes including subject allocation, attendance tracking, marks recording, result processing, and report generation.</i>
4.	<i>Order Management</i>	<i>1/2</i>	<i>Parents/students purchase essential items like school uniform, stationary, textbooks and other items needed by the student.</i>
5	<i>Inventory Management</i>	<i>1/2</i>	<i>Manages all stock-related activities including adding new items, updating stock levels, and monitoring inventory availability to ensure smooth school operations.</i>
5.	<i>Boarding house Management</i>	<i>1/2</i>	<i>Allocate and remove students to houses and rooms with capacity control. Add and remove residences.</i>
6.	<i>Transport management system</i>	<i>1/2</i>	<i>Track vehicles, manages driver verification</i>
7. .	<i>Cafeteria and meal management</i>	<i>2/1</i>	<i>Manages meal planning, food ordering, student meal payments and cafeteria inventory while tracking daily meal distribution and nutritional requirements.</i>
8. .	<i>Maintenance management</i>	<i>2/1</i>	<i>Ensure the ongoing maintenance of all physical assets and building structures</i>

9.	<i>Sports Facility Scheduling</i>	2/2	<i>Book sports fields and manage facility usage.</i>
10.	<i>Event and theatre management</i>	2/2	<i>Manages all the bookings and organizing of internal and extended events, including the school facilities for hire.</i>
11.	<i>Alumni And Donor Financial Management</i>	2/2	<i>Manage alumni, donation and report financial reporting.</i>

3. Business use cases (List all Business use cases in sequence for the project)

No	Business process	Use case	Sem / Inc	Brief Use Case description	Full Name	Completed Yes / No
1.	<i>Student Admission Management</i>	<i>Submit Application</i>	1/1	<i>Parents will apply for their children and send the application to the admin</i>	<i>Anele</i>	<i>Yes</i>
2.	<i>Student Admission Management</i>	<i>Receive & Review Application</i>	1/1	<i>The admin receives the application sent by the parents and reviews it. After that the admin decides whether the applicant meets all the requirements to study at the school and sends the feedback to the applicant.</i>	<i>Azania</i>	<i>Yes</i>
3.	<i>Student Admission Management</i>	<i>Student Registration</i>	1/1	<i>The admin registers a student into the system after the</i>	<i>Anele</i>	<i>Yes</i>

				application has been approved. The student's personal, academic, and contact details are captured and stored in the system.		
4.	<i>Billing Management</i>	<i>Make Payment</i>	<i>1/1</i>	<i>Parents make payments for tuition fees</i>	<i>Akhona</i>	<i>yes</i>
5.	<i>Academic Management</i>	<i>Generate Timetable</i>	<i>1/1</i>	<i>Admin creates timetable schedule s for classes, students and teachers</i>	<i>Lindo</i>	<i>Yes</i>
6.	<i>Academic Management</i>	<i>Record Student Attendance</i>	<i>1/1</i>	<i>Teacher records daily student attendance.</i>	<i>Siyabonga</i>	<i>Yes</i>
7.	<i>Academic Management</i>	<i>Capture Students Marks</i>	<i>1/1</i>	<i>Teacher enters marks obtained by students.</i>	<i>Mthobisi</i>	<i>Yes</i>
8.	<i>Academic Management</i>	<i>Calculates Results</i>	<i>1/1</i>	<i>The system calculates the student marks based on the marks captured.</i>	<i>Sihle</i>	<i>Yes</i>
9.	<i>Academic Management</i>	<i>Generate Report</i>	<i>1/1</i>	<i>System generates academic report.</i>	<i>Sabelo</i>	<i>Yes</i>
10	<i>Academic Management</i>	<i>Maintain Teachers Attendance</i>	<i>1/1</i>	<i>The system records and manages teachers' attendance to monitor staff presence during school working hours.</i>	<i>Siyabonga</i>	<i>Yes</i>
11.	<i>Order Management</i>	<i>Place order</i>	<i>1/1</i>	<i>Parent/student select items and place an order</i>	<i>Amahle</i>	<i>Yes</i>
12.	<i>Order Management</i>	<i>Cancel order</i>	<i>1/2</i>	<i>Parent/student cancels an order before it is completed</i>	<i>Azania</i>	<i>Yes</i>
13.	<i>Order Management</i>	<i>Track order</i>	<i>1/2</i>	<i>parent /student tracks the</i>	<i>Amahle</i>	<i>Yes</i>

				<i>progress of an order</i>		
14	<i>Manage Inventory</i>	<i>Purchase Stock</i>	1/2	<i>Inventory manager purchases stock from an approved supplier to replenish inventory levels</i>	<i>Lindo</i>	<i>Yes</i>
15..	<i>Transport management system</i>	<i>Driver Submit Application</i>		<i>Driver enters personal credentials and uploads required documents, then submit application.</i>	<i>Akhona</i>	
16.	<i>Transport management system</i>	<i>Receive & Review Application</i>		<i>Admin receives driver's application, reviews the provided details and approves, rejects or requests more information.</i>	<i>Azania</i>	
17.	<i>Transport management system</i>	<i>Driver Interview</i>		<i>Transport Manager interviews a driver applicant and records the outcome (pass/fail) in the system</i>	<i>Siyabonga</i>	
18.	<i>Transport management system</i>	<i>Plan Event</i>	1/2	<i>The teacher plans a school event and informs the transport team so transport can be arranged for students and staff</i>	<i>Anele</i>	
19.	<i>Transport management system</i>	<i>Schedule Trip</i>	1/2	<i>The school admin or teacher schedules a</i>	<i>Sihle</i>	

				<i>student trip by entering trip details and transport requirements</i>		
20.	<i>Transport management system</i>	<i>Check List for Student</i>	<i>1/2</i>	<i>Generate digital list of students assigned to a vehicle</i>	<i>Fanele</i>	
21.	<i>Transport management system</i>	<i>Record Driver Availability</i>	<i>1/2</i>	<i>Driver logs in to mark their availability (Available/Not Available) for a scheduled trip.</i>	<i>Mthobisi</i>	
2.	<i>Transport management system</i>	<i>Report Vehicle Issue</i>	<i>1/2</i>	<i>Driver reports any vehicle issues found</i>	<i>Sabelo</i>	
24.	<i>Boarding house management</i>	<i>Allocate students</i>	<i>2/1</i>	<i>System will automatically allocate student to residence and assign room number.</i>	<i>Mthobisi</i>	
25.	<i>Boarding house management</i>	<i>Managing Boarding Houses</i>	<i>2/1</i>	<i>The admin will be able to add or remove Boarding Houses</i>	<i>Sabelo</i>	
26.	<i>Cafeteria and meal management</i>	<i>Order Meal</i>	<i>2/1</i>	<i>Students and staff can browse the cafeteria menu and place meal orders through the system before collection time.</i>	<i>Amahle</i>	
27.	<i>Cafeteria and meal management</i>	<i>Manage Meal</i>	<i>2/1</i>	<i>Cafeteria staff can update daily or weekly menus, including meal options, prices, and availability.</i>	<i>Lindo</i>	
28.	<i>Cafeteria and meal management</i>	<i>Verify Meal Collection</i>	<i>2/1</i>	<i>When students or staff collect meals, the system verifies their order using a student card, QR</i>	<i>Siyabonga</i>	

				<i>code, or order number to ensure the correct meal is issued.</i>		
29.	<i>maintenance management</i>	<i>Schedule Recurring Maintenance</i>	<i>2/1</i>	<i>The system monitors time intervals (e.g., 6 months for AC filters, 2 week for Grass cutting) and automatically creates a new job card without human intervention.</i>	<i>Sabelo</i>	
30.	<i>maintenance management</i>	<i>Report Asset Failure</i>	<i>2/1</i>	<i>A user will be able to digitally log a fault when an asset (e.g., a light bulb or Pipe Burst) fails.</i>	<i>Fanele</i>	
31.	<i>maintenance management</i>	<i>Auto-Assign Maintenance Staff</i>	<i>2/1</i>	<i>Based on the failure type and staff availability, the system triggers alert to the most suitable staff.</i>	<i>Anele</i>	
32.	<i>maintenance management</i>	<i>Complete Job Card</i>	<i>2/1</i>	<i>The assigned staff member receives the notification, performs the repair, and updates the status to complete within the app</i>	<i>Azania</i>	
33.	<i>maintenance management</i>	<i>Track Project Performance</i>	<i>2/1</i>	<i>Uses a dashboard to monitor maintenance projects</i>		
34.	<i>maintenance management</i>	<i>Manage Preventive Schedules</i>	<i>2/1</i>	<i>Digitize maintenance diaries using the Time Planner to schedule inspections and services and ensure compliance dates are not missed.</i>		
35.	<i>Sports & Facility Scheduling</i>	<i>Book Facility (Internal)</i>	<i>2/2</i>	<i>Sport Staff reserve a sports field or indoor centre for school practices or matches.</i>	<i>Sihle</i>	

36.	<i>Sports & Facility Scheduling</i>	<i>Request Facility Hire (External)</i>	2/2	<i>An external organization (e.g., local club) requests to rent a school facility for a private event.</i>	<i>Akhona</i>	
37.	<i>Sports & Facility Scheduling</i>	<i>Issue Digital Access Permit</i>	2/2	<i>System generates a time-bound QR entry code for external users once payment is verified</i>	<i>Lindo</i>	
38.	<i>Events & Theatre Management</i>	<i>Supports event scheduling</i>	2/2	<i>Personnel schedules events according to facility availability</i>	<i>Siyabonga</i>	
39.	<i>Events & Theatre Management</i>	<i>Supports facility booking</i>	2/2	<i>User books a facility for an event according to slot availability</i>	<i>Mthobisi</i>	
40.	<i>Events & Theatre Management</i>	<i>Allocate Seating based on capacity</i>	2/2	<i>The admin approves the number of seats allocated that can carry the event capacity</i>	<i>Sabelo</i>	
41.	<i>Events & Theatre Management</i>	<i>Generate revenue reports</i>	2/2	<i>The user has the option to report the revenue generated from the event to support potential future sponsorship</i>	<i>Fanele</i>	
42.	<i>Alumni & Donor Financial Management</i>	<i>Register Alumni</i>	2/2	<i>Capture and store alumni personal and contact information in the system.</i>	<i>Anele</i>	
43.	<i>Alumni & Donor Financial Management</i>	<i>Create Fundraising Campaign</i>	2/2	<i>Set up a new fundraising campaign with goals, dates, and target audience.</i>	<i>Azania</i>	
44.	<i>Alumni & Donor Financial Management</i>	<i>Record Donation</i>	2/2	<i>Capture and store details of a donation made by a donor.</i>	<i>Sihle</i>	

45.	<i>Alumni & Donor Financial Management</i>	<i>Create Pledge</i>	<i>2/2</i>	<i>Record a donor's promise to contribute a specific amount in the future.</i>	<i>Akhona</i>	
46.	<i>Alumni & Donor Financial Management</i>	<i>Convert Pledge</i>	<i>2/2</i>	<i>Update a pledge status when the promised amount is paid.</i>	<i>Amahle</i>	
47.	<i>Alumni & Donor Financial Management</i>	<i>View Campaign Dashboard</i>	<i>2/2</i>	<i>Display campaign performance metrics such as funds raised and donor activity.</i>	<i>Lindo</i>	
48.	<i>Alumni & Donor Financial Management</i>	<i>Generate Donor Score</i>	<i>2/2</i>	<i>Calculate and assign a score to donors based on giving history and engagement.</i>	<i>Siyabonga</i>	
49.	<i>Alumni & Donor Financial Management</i>	<i>Generate ROI Report</i>	<i>2/2</i>	<i>Produce a report showing the return on investment for fundraising campaigns.</i>	<i>Mthobisi</i>	
50.	<i>Alumni & Donor Financial Management</i>	<i>Export Audit Report</i>	<i>2/2</i>	<i>Generate and download a detailed report for financial review and compliance purposes.</i>	<i>Sabelo</i>	

4. Use case description (**Only describe Semester 1 Increment 1 use cases**)

Use case number	01
Use case name	Submit application
Brief description	The parent sends the application
Triggering event	Application is ready to be reviewed
Actor(s)	Parent
Preconditions	Parent has an account on the system and has filled in the application form
Flow of activities	1. Logging in (or guest/registration) 2. Filling form and uploading documents 3. Receiving display of application fee 4. Confirming/submitting 5. Receiving immediate confirmation ((email+in-system notification)

--	--

Use case number	02
Use case name	Review Application
Brief description	The admin receives the application sent by the parents and review to check if all requirements are met before updating the status of the application
Triggering event	System admin reviews received applications
Actor(s)	Admin
Preconditions	Application exists in the system
Flow of activities	1.Select application 2.Review the application 3.Update status of application 4.Send the status to the applicant

Use case number	03
Use case name	Student Registration
Brief description	Enrolling a student so that they can access school services
Triggering event	Admin marks an application as approved
Actor(s)	Admin
Preconditions	• Applicants exist in the system and has status Approved/Accepted. • Required supporting documents are uploaded • Registration fee invoice exists in the system
Flow of activities	1.Admin selects the approved applicant to register. 2.System displays the applicant's captured details and outstanding required fields/documents. 3. System creates the student profile. 4. System enrolls the student (sets status to Registered/Enrolled) 5. System saves the registration record.

Use case number	04
Use case name	Make payment
Brief description	Parents, guardians
Triggering event	Actor initiates a payment transaction
Actor(s)	Parent/Guardian
Preconditions	Parent/Guardian must be registered in the system Application is Approved

	A valid invoice must exist in the system User must have valid login credentials
Flow of activities	1.Parent/Guardian logs into the system 2.System displays outstanding balances and active invoices 3.Parent selects invoice 4.Parent enters payment details and confirms payment 5.System generates a receipt and notifies the parent.

UseCase number	05
Use case name	Generate Timetable
Brief description	Creates and organizes the academic timetable by assigning subjects, teachers, classrooms, and time slots for the school term while ensuring there are no scheduling conflicts.
Triggering event	The Administrator or Academic Manager needs to create the timetable for the school term because they must make sure everything runs accordingly.
Actor(s)	Academic Manager System
Preconditions	•Teachers must already be registered in the system so the Academic Manager can assign them to classes. •Subjects and classes must exist in the system for the Generate Timetable Use Case to work properly.

	•An academic calendar must be defined so the Administrator or Academic Manager knows when the school term starts and ends.
Flow of activities	1.The Academic Manager logs into the system to start the Generate Timetable Use Case. 2.The Academic Manager selects Timetable Management. 3.The Academic Manager assigns teachers to subjects and classes. 5.The system selects available time slots. 6.The system checks for scheduling conflicts. 7.If no conflicts exist the system generates the timetable. 8.The timetable is saved in the system database. 9.Students and teachers can view the timetable via the portal.

Use case number	06
Use case name	Record Student Attendance
Brief description	Teachers record daily attendance of students in the system.
Triggering event	Teachers begins class attendance recording.
Actor(s)	Teacher
Preconditions	Students must be registered in the class list.
Flow of activities	1. Teacher logs into system. 2. Teacher displays Attendance Section. 3. System displays class list. 4. Teacher marks students as present or absent. 5. System stores attendance record.

<i>Use case number</i>	07
<i>Use case name</i>	Capture Students Marks
Brief description	Teachers enter students' marks obtained from assessments such as tests and exams.
Triggering event	Teacher finishes marking assessments.
Actor(s)	Teacher

Preconditions	Students and subject records must exist in the system.
Flow of activities	1. Teacher logs into system. 2. Teacher selects Assessment Management. 3. Teacher selects grade and subject 4. System displays student list. 5. Teacher enters marks for each student. 6. System stores marks in database.

Use case number	08
Use case name	Calculates Students Results
Brief description	The system calculates student results using weighted averages, applying predefined weightings to tests, assignments, and exams.
Triggering event	Marks are captured by the teacher.
Actor(s)	System
Preconditions	Student's marks must exist in the system.
Flow of activities	1. The system calculates the final mark using configured weightings (e.g., tests 30%, assignments 20%, exam 50%). 2. The system determines pass/fail status and promotion eligibility based on institutional rules. 3. The system stores the results securely

Use case number	09
Use case name	Generates Report
Brief description	The system generates academic reports for students.
Triggering event	Teacher or admin requests student report.
Actor(s)	Teacher, Admin, System
Preconditions	Student marks must exist in the system.
Flow of activities	1. User selects Generate Report. 2. System retrieves student results. 3. System compiles report. 4. System displays or download report.

Use case number	<i>10</i>
Use case name	Maintain Teacher Attendance
Brief description	The system records teacher attendance. System requests momentary GPS access to confirm if teacher is at school
Triggering event	Teacher taps "Sign In" on arrival at school.
Actor(s)	Teacher
Preconditions	Teacher must be registered in the system, mobile/web app with GPS support
Flow of activities	1. Teacher opens app/module and selects "Sign In". 2. System prompts for one-time GPS permission Admin marks attendance. 3. system captures single GPS coordinate, verifies against geofence. 4. If valid, logs "Present" with timestamp and GPS proof 5. Success notification shown; record is stored at database 6. Teacher

Use case number	<i>11</i>
Use case name	Place Order
Brief description	Parent/student selects items and places an order. The system records and processes the payment.
Triggering event	Parent or student decides to purchase items & clicks "Place Order" after selecting items.
Actor(s)	Admin, Parent, Student
Preconditions	The user and items must be registered/exist in the system.
Flow of activities	1. The parent/student logs into the system & views the list of available items. 2. The user selects the required items 3. User adds or removes items in the cart. 3. The user reviews the selected items & confirms the order details. 4. The system validates the order information & stores the order in the database. 5. The system displays an order confirmation 3. Select the payment method 4. Proceed to Checkout

Use case number	12
Use case name	Cancel Order
Brief description	Parent or student cancels an existing order before it is processed or collected. The system updates the order status and processes a refund payment.
Triggering event	Parent or student selects an order and clicks “Cancel Order.”
Actor(s)	Admin, Parent, Student
Preconditions	1. The user must be registered and logged into the system. 2. The order must exist in the system. 3. The order must still be eligible for cancellation.
Flow of activities	1. The parent/student logs into the system. 2. The user views their order history or current orders. 3. The user selects the order they want to cancel. 4. The system displays the order details and cancellation option. 5. The user confirms the cancellation request. 6. The system validates whether the order can be cancelled. 7. The system updates the order status to Cancelled. 8. The system initiates a refund process. 9. The system displays a cancellation confirmation message.

Use case number	13
Use case name	Track Order
Brief description	Parent or student monitors the progress and current status of an order after it has been placed. The system displays real-time updates such as pending, processing, or ready for collection
Triggering event	Parent or student selects an existing order and clicks “Track Order.”
Actor(s)	Admin, Parent, Student
Preconditions	1. The user must be registered and logged into the system. 2. The order must exist in the system. 3. The order must have been successfully placed.
Flow of activities	1. The parent/student logs into the system. 2. The user navigates to My Orders or Order History. 3. The user selects the order they want to track. 4. The system retrieves the order details from the database. 5. The system displays the current order status (Pending, Confirmed, Processing, Ready for Collection, or Cancelled).

	6. The system displays the estimated collection date if available. 7. The user reviews the order progress.
--	---

Use case number	14
Use case name	Purchase Stock
Brief description	Inventory manager purchases stock from an approved supplier to replenish inventory levels
Triggering event	User selects the 'stock request form' option in the system to request items
Actor(s)	Inventory manager
Preconditions	1. Manager must be registered and logged in the system. 2. Supplier and items must exist in the system. 3. Inventory levels notifies when the stock level is low
Flow of activities	1. The inventory manager logs into the system 2. The manager checks current inventory and identifies items that are low . 3. The manager selects "Purchase Stock" in the system. 4. The manager picks an approved supplier from the supplier list. 5. The manager adds the items to be ordered, along with quantity and expected delivery date. 6. The manager submits the purchase order for processing. 7. The system logs the purchase order and marks the stock as "pending". 8.The system sends the purchase order to the supplier. 9. When the supplier delivers the stock, the manager checks and verifies the items against the order. 10. Once verified, the system updates the actual inventory quantities. 11. The system changes the purchase order status to "Completed" and sends a notification to both the supplier and the warehouse.

Use case number	15
Use case name	Driver Submit Application
Brief description	The driver enters required personal, license, and vehicle details, uploads supporting documents, and submits an application to join the transport management system.

Triggering event	The driver decides to apply to become part of the transport service
Actor(s)	Driver
Preconditions	1. Driver access to the system. 2. Application form is available. 3. Documents are ready for upload.
Flow of activities	1. Driver opens the application form. 2. Driver enters personal information. 3. Driver enters license and vehicle details. 4. Driver uploads required documents. 5. Driver reviews the entered information. 6. Driver submits the application. 7. System stores the application & notifies the transport administrator.

Use case number	16
Use case name	Receive & Review Application
Brief description	The transport administrator receives driver applications, reviews the submitted details and documents, and decides whether to approve, reject, or request more information.
Triggering event	A new driver application is submitted.
Actor(s)	Transport administrator.
Preconditions	1. Driver application has been submitted. 2. Admin has access to the system.
Flow of activities	1. System notifies the admin of a new application. 2. Admin opens and reviews the application. 3. Admin checks documents and details. 4. Admin chooses to approve, reject, or request more information. 5. System records the decision. 6. System notifies the driver of the outcome.

<i>Use case number</i>	17
<i>Use case name</i>	Driver Interview
<i>Brief description</i>	Transport Manager interviews a driver applicant and records the interview outcome (pass/fail) in the system.
<i>Triggering event</i>	Transport Manager schedules or conducts an interview with a driver applicant.
<i>Actor(s)</i>	Transport Manager
<i>Preconditions</i>	Driver applicant must have submitted an application; Transport Manager must be logged in.
<i>Flow of activities</i>	1. Transport Manager opens Driver Interview module. 2. Manager selects applicant from list. 3. Manager conducts interview. 4. Manager records outcome (Pass/Fail) and notes. 5. System stores the record.

Use case number	18
Use case name	<i>Plan Event</i>
Brief description	The teacher plans a school event and informs the transport team so transport can be arranged for students and staff
Triggering event	<i>A school event is approved and needs Transport</i>
Actor(s)	1. <i>Transport Administrator</i> 2. <i>Driver</i> 3. <i>Student</i>
Preconditions	1. Event transport plan is saved with an event ID 2. Vehicles and drivers are booked for the event date
Flow of activities	1. The teacher logs into the system 2. They select "Plan Event" and enter event details such as event name, date, time, location, and number of students and staff 3. They add pickup points and any special transport needs 4. They submit the event request to the transport team 5. The school transport coordinator reviews the request and checks bus and driver availability 6. The coordinator assigns buses and drivers and confirms the plan 7. The system notifies the teacher and drivers once transport is confirmed

Use case number	19
Use case name	Schedule School Trip
Brief description	The school admin or teacher schedules a student trip by entering trip details and transport requirements

Triggering event	A school trip is planned and requires transport scheduling.
Actor(s)	Admin and transport manager.
Preconditions	The admin has an active account on the system. Trip details (destination, date, number of students) are available. Transport resources (buses, drivers) are registered in the system.
Flow of activities	1. Admin logs into the system. 2. Selects "Schedule Trip" option. 3. Enters trip details (destination, date, time, number of passengers). 4. System displays available transport options (bus capacity, driver availability). 5. Admin selects preferred transport option. 6. Confirms and submits trip schedule. 7. System generates trip confirmation and notifies transport manager. 8. Notifications sent to parents/students (optional).

Use case number	20
Use case name	Check List for Student
Brief description	The system generates a digital list (manifest) of all students assigned to a specific vehicle for a scheduled trip . The manifest includes student names, boarding house, and emergency parent contact details.
Triggering event	Transport manager or driver needs to verify which students are assigned to a vehicle before departure, or for attendance during the trip.
Actor(s)	Transport Manager, Driver
Preconditions	1. Students must be registered in the system with their boarding house and emergency contacts. 2. A trip must be scheduled. 3. Students must be assigned to a specific vehicle for that trip.
Flow of activities	1. Transport Manager logs into the Transport Management System. 2. Manager selects "Generate Student Manifest". 3. System displays the vehicle(s) assigned to that trip.

	4. System retrieves the list of students assigned to that vehicle. 5. System displays the digital manifest showing student name, boarding house, and emergency parent contact (for use only in case of incident). 6].l. Driver can access a version on a mobile device during the trip.
--	--

Use case number	21
Use case name	Record Driver Availability
Brief description	Driver logs in to mark their availability (Available/Not Available) for a scheduled trip.
Triggering event	Driver needs to indicate availability for an upcoming trip.
Actor(s)	Driver
Preconditions	Driver must be registered in the system; a trip must be scheduled.
Flow of activities	1. Driver logs into Transport Management System. 2. Driver selects "Record Availability". 3. System displays upcoming trips. 4. Driver selects a trip and marks Available or Not Available. 5. System saves the record.

Use Case number	22
Use case name	Report Vehicle Issue

Brief description	A driver reports a fault or issue with an assigned vehicle during or before a scheduled trip. The system records the problem and notifies the transport manager.
Triggering event	Driver notices a vehicle issue and selects “Report Vehicle Problem” in the system.
Actor(s)	Driver, Transport manager
Preconditions	1. The driver must be registered and logged into the system. 2. The driver must be assigned to a vehicle and trip. 3. The vehicle must exist in the system
Flow of activities	1. The driver logs into the system. 2. The driver views assigned trip and vehicle details. 3. The driver selects Report Vehicle Problem. 4. The system displays a fault reporting form. 5. The driver enters problem details (e.g., engine issue, tyre puncture, brake fault, lights not working). 6. The driver submits the report. 7. The system records the issue in the database. 8. The system notifies the transport manager 9. The transport manager reviews the report and arranges repair, replacement vehicle, or trip rescheduling if necessary.

[Meeting Minutes](#)

Meeting Minutes for Increment 2

Meeting 1

1. Date and time of the meeting: 17/04/2026 ,20:00 pm.
2. Duration of the meeting: 1hr 30min
3. Attendance –Present / Absent: All present
4. Minutes: - Discussion of use cases for increment 2.
 - including the use cases for increment 1 that we didn’t complete, so we put them on increment 2.
 - Remove Cancel order Use Case, Manage inventory Use Case.

- Change Add/ Remove residence Use Case to Manage Boarding House Use Case.
- Add stakeholders Transport Manager, Bording House Manager, Ecommerce Manager, Inventory officer.
- Remove GPS Use Case Tracking vehicles using GPS Use Case.
- Add Monitor vehicle status Use Case.
